

### **30LR BOW LIGHT TECHNICAL SPECS**

The 30LR bow light is about 6.5 inches long when in spot beam and 6 inches long in flood beam.

The head is about 1.25 inches across and the tube is 1 inch and weighs about 8 ounces with battery.

Runs on 1 18650 battery.

Run time = 3.5 hours with our Red led with almost no dimming over that time. 2 hours with White 350 and Green with almost no dimming and then another 2+ hours with the light slowly dimming over that time. 1 hour with our white 800 with almost no dimming and then another hours with the light slowly dimming over that time.

Lumens Red = 200, Green = 250, White 350 = 350 and White 800 = 800.

Max distance in yards the 30LR can shine, Red = 230, Green = 274, White 350 = 408, White 800 = 338.

While the white 800 puts out more overall light, the white 350 does shine further because the 30LR focuses the light into a tighter beam when in spot beam.
